# Open Access Blog

**Neuroanthropology**  
Understanding the encultured brain and body

Neuroanthropology forms part of PLoS Blogs, and is one of eleven founding blogs that joined with PLoS.org, everyONE and Speaking of Medicine to provide a comprehensive network that covers science and medicine. Neuroanthropology examines the integration, as well as the breadth, of anthropology and neuroscience. Sometimes we do straight neuroscience, other times pure anthropology. Most of the time we'll be somewhere in the middle. The blog thrives on intersections and convergences, aiming to mesh the insights of neuroscience and anthropology into a more cohesive whole. We often throw some psychology, philosophy, evolution and human biology into the mix as well.
