Learning Gate Community School Presentation Proposal
Sustainable Food Conference 2015

At Learning Gate Community School, we have taken the idea of a school with a garden and designed an interactive schoolroom within a garden. The garden is nestled in among trees, wetlands, and ponds, and each year we create an interesting and engaging environment together with our students. By integrating literature, math, science, art, music, health, and character development into the garden curriculum, we are able to connect academic subjects to real world situations. Mr. Nate’s 5th grade class would like to present examples of lessons learned in the garden.
